

Prodacapo Activity Tracker

Reduces the time and effort needed to collect nonsystem data and refresh ABC models

Prodacapo Activity Tracker is a web-based optional add-in component to the Prodacapo ABC/M software solution. The component significantly reduces the time and effort needed to track the amount of time spent per activity and to refresh your ABC models.

Prodacapo Activity Tracker allows you to delegate responsibility for updating ABC information to employees, which increases their involvement with the final ABC information.

Using Prodacapo Activity Tracker:

- Users throughout your organization can easily and rapidly update how much time they have spent on activities.
- Managers can review and approve the information.
- Administrators can monitor workflow and upload information directly into the ABC models.

This allows for rapid collection of data, easy administration, and the ability to replenish models more often, providing more timely results.

Key features

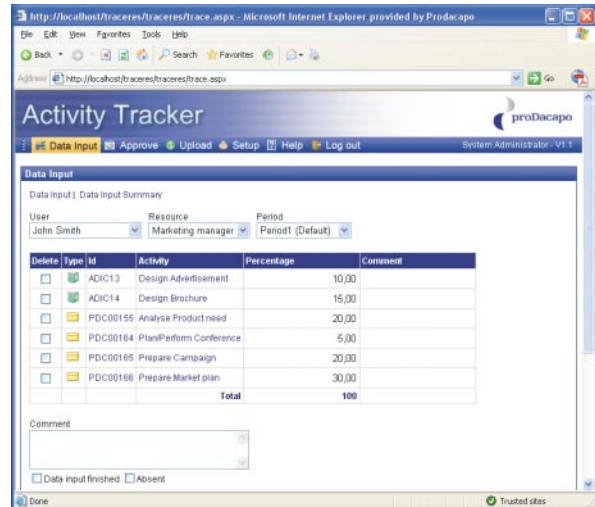

Flexible set-up

Prodacapo Activity Tracker is very flexible to set up, making it easy to collect data. This means that:

- Users can be instructed to report on a daily, weekly, monthly, or other basis in Activity Tracker, regardless of time period used in the ABC model.
- Users can report in a time format, such as number of hours or percentage, regardless of settings in the ABC model.
- Each user can report individually or one user can report collectively for many users.
- A user can report if they correspond to one resource in the ABC model or part of a resource in the model.

Web-based

The component is web-based, which means no software needs to be installed on users' desktops. Users throughout your organization can easily access Prodacapo Activi-

Data entry screen for users reporting time spent on different activities.

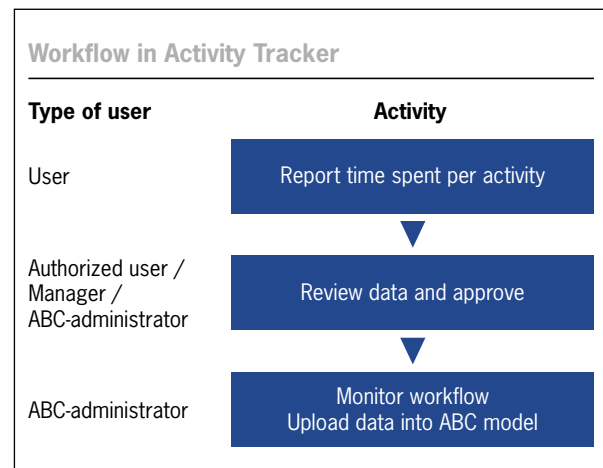

ty Tracker via their standard web browser, making it simple and cost-effective to collect data – even from remote branches and offices.

Flexible user-friendly data entry

The system is designed to make it as easy and flexible as possible for all users to rapidly enter their data – no matter what their position within your organization.

Examples of features:

- Only displays activities relevant to each user.

- Can include instructions to guide users in completing the data.
- Can display historic data from previous period as an aid and users can copy values from a previous period and simply alter values.
- Users can comment on their data.

Approval and validation

Functionality for approval enables contributors' superiors to review the data and check that each piece of data is in place before it is approved for uploading into the ABC model.

Easy administration – workflow and e-mail alerts

Administrators can easily monitor the entire data collection and approval process. They can also send e-mail to remind users that data are not registered or approved.

Full integration with ABC models

Administrators can upload all, or parts, of the Activity Tracker information directly into the ABC model with just a push of the button.

Modern technology

The solution is based on the latest technology .NET.
