

Prodacapo Power Analytics

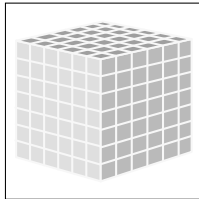

Making advanced analysis and reporting simple

Prodacapo Power Analytics is an optional add-on component to the Prodacapo ABC/M software solution. It extends the already broad analysis and reporting options in Prodacapo by offering online analytical (OLAP) capabilities. Prodacapo Power Analytics makes it easy for users across your organization to analyze data in any dimension they wish. The component significantly reduces the time to share, understand, and act upon critical business information within your organization.

Key features

Fast, multi-dimensional analyses

Prodacapo Power Analytics allows users to slice-and-dice, drill down, and analyze data in any dimension they wish, incorporating graphs, charts, and grids quickly and easily.

Prodacapo Power Analytics allows users to slice-and-dice, drill down, and analyze data in any dimension they wish.

Users can choose from predefined reports or they can easily make ad-hoc analyses and reports.

Easy to use

Users quickly learn how to work in Prodacapo Power Analytics. They do not need to understand databases or query languages – just how to point and click. The user-

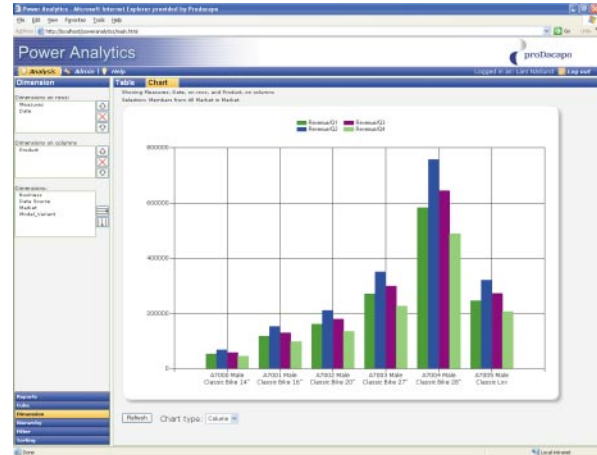

friendly interface allows users throughout your organization – whatever their position – to easily extract precisely the information they need.

Easy access via standard web-browsers

Users across your organization easily access Prodacapo Power Analytics via their standard web browser. No software needs to be installed on user's desktops. This means that you can effortlessly and cost-effectively give users access to Prodacapo Power Analytics – even if they are based in remote branches and offices.

Rapid and flexible Implementation

Prodacapo Power Analytics comes with pre-designed analytical logic (cubes). This allows your organization to get

The user-friendly interface allows users throughout your organization – whatever their position – to easily extract precisely the information they need.

up and running as quickly as possible, delivering immediate results and return on your investment. You can easily customize the pre-designed analytical logic to meet specific requirements within your organization.

Prodacapo Power Analytics is server-based, which means that installation, upgrading, and changes only need to be made once – on the server. No software needs to be installed on users' desktops. This makes Prodacapo Power Analytics easy and cost effective to implement and administer.

Security

The Prodacapo Power Analytics security is based on the extensive security offered by MS Analysis Service 2000. This flexible and robust security capability permits information sharing, whilst ensuring that data is accessible only on a need-to-know basis. NT authentication and Active Directory are supported. In Prodacapo Power Analytics you can also define user groups and dictate which reports and analyses users can access.

Modern technology

The solution is based on Microsoft's market leading OLAP server, Analysis Server, and is developed with the latest technology .NET.
